Data Structures Practical

Practical - VII

Roll No. :S040	Name:Aditya Sopte
Class :SY IT	Batch :
Date of Assignment :04-08-2026	Date/Time of Submission :04-08-2026

Hash Table:

Write a program to:

- a. Implement a hash table with separate chaining for collision handling.
- b. Store and retrieve data from the hash table.

CODE:

```

size=5
table=[[] for _ in range(size)]

def insert (key,value):
    table[(key%size)].append((key,value))
def search(key):
    for k,v in table[key%size]:
        if k==key:
            return v

    return "not found"

insert(10,"sg")
insert(15,"pg")
insert(20,"og")
insert(30,"kg")
insert(32,"mg")
insert(21,"DG")

print(table)
key= int(input("Enter key"))
print(search(key))

print("Aditya S040")
|

```

OUTPUT:

```

[[ (10, 'sg'), (15, 'pg'), (20, 'og'), (30, 'kg') ], [ (21, 'DG') ], [ (32, 'mg') ], [], [] ]
Enter key 20
og
Aditya S040
>>>

```

Curiosity Questions:

1. In a BST, which side (left or right) has **smaller numbers** than the root?
2. If we insert numbers 10, 20, 5 into a BST, which number will be at the root?
3. What will the inorder traversal of a BST give — sorted numbers or random numbers?
4. Where will the **largest number** in a BST always be found?
5. If the root of a BST is 50 and we search for 70, will we go left or right? Why?
6. If a BST has only **one node**, what is its inorder traversal?
7. Can we create a BST from characters like A, B, C instead of numbers?
8. If we insert numbers 5, 10, 15, 20 in order, will the tree be balanced or like a straight line?
9. In a BST, do we check the left child first or the right child first in inorder traversal?
10. If we delete the root of a BST, will the tree disappear?
